**INT69 G® Diagnose**

The mounting, maintenance and operation are to be carried out by an electrician. The valid European and national standards for connecting electrical equipment and cooling installations have to be observed. Connected sensors and connection lines that extend from the terminal box have to feature at least a basic insulation.

### Application

The compressor protection INT69 G Diagnose is a further development of the reliable KRIWAN motor protectors. An additional input for a discharge gas sensor and its supplementary flexible-response protective functions help to improve the availability and extend the service life of a refrigeration system.

The INT69 G Diagnose automatically saves operational and error data in a non-volatile memory. This data can be retrieved on a PC and analysed for diagnose. The full scope of the diagnose is achieved by using a KRIWAN-specific AMS sensor. This motor protector is mainly employed on small and medium semi-thermal piston compressors.

### Functional description

The temperature monitoring of the motor winding is done with two evaluation processes:
- **Static**: Switch-off is immediate if the nominal response temperature of the built-in AMS or PTC sensors is reached.
- **Dynamic**: If the temperature increases unusually quickly, the motor is switched off immediately even if the temperature is still far below the nominal response temperature. This prevents excess temperatures from occurring.

The discharge gas temperature is evaluated statically:
A short circuit at an AMS or PTC input also leads to a switch-off. A short cycling leads to a reset delay. If no discharge gas sensor is installed, a 100 ohm resistor has to be installed at the input. After cooldown or elimination of the error and a subsequent reset delay, the compressor can be restarted.

For operation in the specified manner, the supply voltage has to be on permanently on the INT69 G Diagnose.

### Technical specifications

**Supply voltage**
- AC 50-60Hz 115-230V ±10% 3VA

**Permitted ambient temperature**
- -30...+70°C

**Temperature measuring circuits**
- 1-2 AMS sensors in series
- alternative 1-9 PTC acc. to DIN 44081, DIN 44082 in series
- \( R_{\text{PTC, total}} \leq 1,8 \, \Omega \)
- \( R_{\text{PTC, total}} \leq 4,5 \, \Omega \) \( \pm 20\% \)
- \( R_{\text{PTC, static}} \leq 2,75 \, \Omega \) \( \pm 20\% \)
- \( R_{\text{PTC, static}} \leq 30 \, \Omega \)

**Short circuit monitoring system PTC**
- Typically \( < 30 \, \Omega \)

**Input, operating recognition motor**
- **Lower limit**
- **Upper limit**
- AC 100V at 20Hz up to 175V at 90Hz
- AC 460V ±15%

**Operation with frequency converters**
- Suitable

**Switching frequency overstepping**
- 3 switch-offs in 30 sec.

**Reset delay**
- **Motor temperature static**
  - 1min \( + 12s \)
- **Motor temperature dynamic**
  - 5min \( + 1min \)
- **Discharge gas temperature**
  - 10min \( + 2min \)
- **Switching frequency overstepping**
  - 5min \( + 1min \)

**Reset of reset delay**
- Main reset >5 sec. only possible if there is no error current

**Relay**
- **Contact**
  - AC 240V 2.5A C300
  - at least AC/DC 24V 20mA
- **Mechanical service life**
  - Approx. 1 million switching cycles

**Interface**
- Diagnose port (DP)

**Protection class acc. to EN 60529**
- IP00

**Connection type**
- Eye screw M8 (operating recognition), flat plug sleeves (PTC), screw terminals

**Housing material**
- PA glass-fibre-reinforced

**Mounting**
- Can be snapped onto 35mm standard rail as per EN 60715 or screw mounted

**Dimensions**
- Refer to dimensions in mm

**Weight**
- Approx. 200g

**Check base**
- EN 61000-6-3, EN 61000-6-2
- EN 61010-1
- Overvoltage category II
- Pollution level 2

**Approval**
- UL File No. E75899 JURa
